

Bitcoin+

WhitePaper

The DeFi reflection token with [Guaranteed Static Rewards](#).

What is BITCOIN+ (PLUS)?

BTC⁺ (Plus) is the unique DeFi reflection token gives an innovative buy-back system through static rewards, liquidity-provider acquisition, manual-burn, and game-changing use-cases.

We have great respect for Bitcoin's mysterious founder Satoshi Nakamoto. That's the reason behind the name of our crypto coin BitcoinPlus (BTC+). However, we are not related to the original cryptocurrency Bitcoin by any means.

How to assure Guaranteed Static Rewards?

The BitcoinPlus (BTC+) collects a 5% tax on each transaction, which is stored inside the contract. Whenever any sell occurs, a fraction of the tax amount is used to purchase tokens from the liquidity pool automatically. Those tokens are immediately burned after purchase.

There are three way benefits:

- 1. Boost in Value:** Following the tokens from the Liquidity pool are purchased, the new BNB amount will be added to the pool, and the amount of the tokens will be reduced, which rises in a price jump.
- 2. Free BNB:** Once those tokens will be burnt, it will be just like supplementing free BNB to the pool as there will be no tokens to sell in the future.
- 3. Faith & Reliability:** Investors can be relentlessly doubtful and often frightened by a bearish market. Because of the automatic buyback, investors will never see more than two sells in a row (98% of the time).

Reward Holder Benefits:

1. 2% rewards re-shared on every trade.
2. Join a committed network of optimistic investors in the purchase back contract and realize the potential for an increase in performing this concept.
3. Once the investors recognize that the principles works and the contract automatically purchases after every transaction, they will feel more convinced to invest and hold.

Tax Breakdown

- 85% Community Liquidity Pool
- 10% Marketing Fund
- 5% Maintenance Fund

Community Support:

The BitcoinPlus community began with the roots of a purpose. Without community support, it's impossible to grow this type of decentralized system. So, we made a solid community-driven platform that will follow the perfect storm of digital currencies like BTC or DOGE.

The aim is to implement a secure place to trade your precious crypto while continuing decentralized. We are faithful to our holders, and that provides us the means to expand exponentially. We will regularly balance this Ecosystem so it may produce growing engaged parties to this platform.

Our Tokenomics is unique, with robust design, best technical implementations, and the viral growth from our good old fashion memes will strengthen the platform's robustness and eventually present, extra benefits to the Ecosystem.
